3. MOTIVATION

(A) Proposed Development:

This is a simple consolidation of two erven within an estate known as Benguela Cove.

The two portions being 180 and 181 are accessible from the internal, private road within the estate.

The estate is accessed directly from the R43.

The estate was created in 2004 and all the infrastructure of a typical estate is in place.

As this is a simple consolidation, and removing one erf from the estate, it will create a positive effect on the traffic within the estate as well as on the R43.

Thus a direct benefit to the environment.

We are not making any application for rezoning or for a subdivisional area.

(B) Character of the Environment:

This is a simple consolidation.

No land use change has been applied for. As this is an agricultural estate with private roads and private open space there are varying zonings in the area. The two portions are Residential Zone 1. To the west is Open Space Zone 1 and to the east Transport Zone 2. Other zonings in the area are Open Space Zone 3 and Agricultural Zone 1.

The bulk of the portions in that area are approximately 200m². There have been a few consolidations of the Residential Zone 1 portions in that area. Obviously the portions with different zonings are much larger.

As this is a 2004 development there is no historical architecture.

The conservation worth area were determined with the application for the development in 2004. They are being managed through that process. The Open Space Zone 1 and the Botrivier estuary can be classed as nearby natural assets and their relationship to the two erven in question is dealt with in the rules of the HOA.

There are no community facilities nearby.

The privacy of the neighbours is dealt with in the rules of the HOA.

This simple consolidation will not have any effect on that.

As the houses are typically far from the street there will be no detrimental effect on this with this simple consolidation.

The views of the neighbouring erven will not be negatively affected by this simple consolidation.

(C) Desirability of the Proposed Utilisation

This is a simple consolidation.

Even though we are doubling the size of the portion, it has no agricultural potential other than a large vegetable garden.

There are no conservation worthy natural or urban environments.

There are no economically exploitable minerals on the portions. The simple consolidation is near the high water mark of the estuary. The benefit for the other residents in the estate is that there is one less portion in the estate, so one less house and thus fewer people enjoying the coast line. All these matters would have been addressed when the original application for the development was made.

(D) Investigation carried out in terms of other laws which are relevant to the consideration of the application:

This is a simple consolidation.

No investigations were done in any other Act.

This application will not trigger any of the Acts mentioned.

(E) The impact of the proposed land development on municipal engineering services:

This is a simple consolidation.

No additional services will be provided, and I do not anticipate any problems with that. They will also cost nothing.

I do not anticipate them having any affect on the natural environment or creating a pollution problem.

As previously mentioned, the simple consolidated portions will be accessed from the private road of the estate which in turn gains access from the R43.

There will be less traffic as there is now one fewer portion in the development.

We are not rezoning to a sub-divisional area.

(F) Consideration of forward planning and land use documents:

This is a simple consolidation.

The consolidation is in line with the zoning scheme regulations and forward planning documentation.

(G) Planning Principles:

This is a simple consolidation.

Spatial Justice:

This application for consolidation does not address spatial justice in any way. In fact it is completely opposite. To address spatial justice we should be applying for subdivision of the one portion in ten small erven. This is not being considered as it would not be supported by the estate or the municipality.

Spatial Sustainability:

This whole estate is spatially sustainable. Within its boundaries there are mixed uses, environmental areas, agricultural areas and residential areas. These were all identified with the original

application for the estate. This simple consolidation in no way detracts from that.

Efficiency:

If one looks at the original development I think you could say that it fails the efficiency test, but luckily we are not. We are only looking at the simple consolidation. This will be efficient.

Spatial Resilience:

This is a simple consolidation.

It does not contribute positively or negatively to any special resilience within the estate.

Good Administration:

I am sure that the local authority will fast track this application as it is a simple consolidation within an estate.

4. CONCLUSION

In conclusion I see no reason why this consolidation will not be approved.
