- 2.5 The local content (LC) expressed as a percentage of the bid price must be calculated in accordance with the SABS approved technical specification number SATS 1286: 2011 as follows:

$$LC = [1 - x / y] * 100$$

Where

*x* is the imported content in Rand

*y* is the bid price in Rand excluding value added tax (VAT)

Prices referred to in the determination of *x* must be converted to Rand (ZAR) by using the exchange rate published by the South African Reserve Bank (SARB) at 12:00 on the date of advertisement of the bid as required in paragraph 4.1 below.

**15. SECTION 37(2) OF THE OCCUPATIONAL HEALTH AND SAFETY ACT, 1993  
(ACT 85 OF 1993)**

**INTRODUCTION**

The Occupational Health and Safety Act, 1993 (Act 85 of 1993) stipulates that the Chief Executive Officer is primarily responsible or liable for the health and safety of all his/her employees. This is embedded in Section 16(1) of the said Act. This responsibility or liability is also extended to include a mandatory that performs work on behalf of the employer on his/her premises.

A “mandatory” is defined in the said Act as: - *“Including an agent, contractor or subcontractor for work, but without derogating from his status in his own right as an employer or user”*

In terms of Section 37(2), read with Section 41, of the said Act, it is legally possible for an employer to indemnify himself from this responsibility or liability regarding the actions of the mandatory. Section 37(2) stipulates that there should be a written agreement in place between the employer and the mandatory regarding the arrangements and procedures between them to ensure compliance by the mandatory with the provisions of the Occupational Health and Safety Act, 1993.

By ensuring that there is a written agreement in place, the Management of Overstrand Municipality is acting in a responsible manner, so as to ensure that this requirement is indeed being met.

In order to ensure that this written agreement is honoured at all times, regular inspections of work that is performed will be conducted and if found not complying with the said agreement, a notice of non-compliance will be issued. All work will be stopped and reasons for non-compliance must be given and what corrective action will be taken to rectify the situation must be stipulated.

<b>COMPENSATION FOR OCCUPATIONAL INJURIES AND DISEASES ACT, 1993 (ACT 130 OF 1993)</b>	
<p><b>Overstrand Municipality</b> has legal duty in terms of Section 89 of the said Act to ensure that all contractors with whom agreements are entered into for the execution of work are registered as employers in accordance with the provisions of this Act and that all the necessary assessments have been paid by the contractor.</p> <p>In order to enter into this agreement, the following information is needed regarding the above-mentioned:</p>	
<p>Contractor’s registration number with the office of the Compensation Commissioner:</p>	
<p><b>NOTE:</b> A copy of the latest receipt together with a copy of the relevant assessment OR a copy of a valid Letter of Good Standing must be handed in, in this regard.</p>

## **PART B – SPECIFICATIONS AND PRICING SCHEDULE**

**17. SPECIFICATIONS**

**1. Introduction**

- 1.1. The Overstrand municipality as part of its network rollout and standardisation, has stringent guidelines as to how its structured cabling is implemented across the municipality. As the municipality needs to support and run its core business across a reliable, dependable and predictable local network infrastructure, it needs to ensure that the commissioning or re-structuring of its cabling is done according to strictures and guidelines. This has the effect of removing a potentially major obstacle in ICTs mandate to deliver communications and data and enable the business in its service delivery responsibility.
- 1.2. The purpose of the document is to provide the contractor with information specific to the implementation of Standards based generic structured cabling as per the requirements of the Overstrand Network environment and the support/maintenance thereof.

**2. Background**

- 2.1. The Overstrand has implemented a set of guidelines and products to ensure that it is reliable and that current infrastructure, future expansion, changes or additions does not negatively impact on the network data and voice quality that is delivered by its structured cabling infrastructure.
- 2.2. The municipality has standardised on Krone Equipment for its cabling using Cat 6 cabling. Ideally it would prefer that this standard is continued going forward as it affords the municipality:
  - 2.2.1. A warranty and guarantee of workmanship and build quality from the vendor if all equipment is standardised,
  - 2.2.2. Compatibility and full integration of its current install base
  - 2.2.3. Higher data speeds because of the standardisation and reliability it affords
  - 2.2.4. Decreased callout, troubleshooting and problems due to cabling faults and unreliability;
- 2.3. The municipality has entertained other equipment and manufacturers over the years as potential alternative solutions (in isolated environments), in order to diversify its reliance, to scope the alternatives as per the specifications as well as to realise a cost benefit. However after evaluating the installing and products they were rejected as many of the points in 2.2 above could not be met causing more problems and at a greater all-inclusive-cost-of-product cost to the municipality. Meaning that if the cost of callouts, troubleshooting, re-wiring, loss of productivity and service availability is taken into account, the alternative products cost the municipality more in the longer term.
- 2.4. Guidelines and Requirements
  - 2.4.1. The Overstrand Municipality Structured Cabling guideline, as outlined in the pages to follow, is mandatory in terms of the acceptance of work done in or on Municipality premises and facilities. Compliance therefore determines whether or not the Municipality will take acceptance of installed Structured Cabling Systems (SCS) or subsystems.
  - 2.4.2. The contractor is to note that despite the Structured Cabling System’s vendor warranty requirements (which must be met), work done has been commissioned by the Overstrand Municipality and as owners of the supplied Structured Cabling System, it is expected that the Requirements and Technical directives of the Overstrand take precedence at all times.
  - 2.4.3. The acceptance requirements as outlined in sections 5.2 to 5.9 are mandatory. **No variation will be tolerated nor accepted.**

**5.2. General product conformance requirements**

- 5.2.1. The Overstrand Municipality currently uses CAT 6 data network cables and component products.
- 5.2.2. All installed components shall be new, complete, in good condition and unused albeit for demonstration purposes.
- 5.2.3. All cable reels are to be visually inspected for damage incurred during shipping and transit prior to installation.
- 5.2.4. Cable and connecting components found to be damaged or defective prior and during the installation process are to be removed immediately and returned to the supplier at no additional cost to the Municipality.

**5.3. General installation practice requirements**

- 5.3.1. Cable is not to be pulled in under excessive load. At all times during any given "pull", the cable under load should easily react and feed to pulling tension.
- 5.3.2. Cable being pulled in should be handled by no less than 2 individuals at all times in order to avoid damage to the cable by means of kinks, twisting along its own axis, getting snagged etc. It is recommended that 3 installers co-operate in the pulling in of any given cable run, 1 on each end and another in the middle or positioned near any obstructions to feed slack and thus avoid undue stress on the cable.
- 5.3.3. Whenever possible cable should be placed into pathways as opposed to pull in under tension.
- 5.3.4. Care should be taken not to score conductors during the removal of the outer insulating sleeve of the cable when preparing to terminate pairs.
- 5.3.5. Cable bends are to be kept to 25mm at minimum at all times (installed).
- 5.3.6. During the installation process, installers are required to visually inspect cable and connecting hardware components for damage. If such damage is found, e.g. tears in the outer jacket of the cable, severe kinks as identified by white/grey bands of discoloration on cable jacket, these components are to be replaced immediately.

<b>Initial:</b>	
-----------------	--

- 5.3.7. The installer is to make use of best practices when handling unjacketed conductors. Care is to be taken as not to create pair spread, pair wrapping, pair separation and the re-twisting of pairs.
- 5.3.8. No more than 13mm of wire may be exposed for the purposes of termination, the only acceptable exception being high band modules where such practices are dictated by the design of the module.
- 5.3.9. A total of 4 labels will identify a cable. All cabling shall be clearly labelled at both ends to the rear of the point of termination no more than 100mm from such a termination point. Additional labels will be put on the wall point and patch panel to identify the cable.
- 5.3.10. All patch panel ports and workstation outlets shall be clearly labelled by means of appropriately secured printed labels (hand written labels are not acceptable).
- 5.3.11. All patch and workstation outlet cables shall be clearly labelled by means of an appropriately secured Printed label.
- 5.3.12. All labelling schemes shall be confirmed with the appropriate representative of Overstrand ICT Networks before being applied.
- 5.3.13. The maximum number of screws or bolts as provided for by the design of connecting hardware or SCS components and accessories are to be used without exception.

**5.4. Ducting and supporting structures**

- 5.4.1. Where support structures are used, such structures are to provide support at a maximum of 1.5 meters along the length of the run as to avoid cable tension as a result of the cumulative weight of such cable acting upon itself at the next point of support.
- 5.4.2. The surface of such support structures e.g. Cable hangers will not pose a risk of damaging cable due to sharp edges or angular surfaces which would act against the symmetry of wire pairs within the cable or a risk to installers e.g. Cuts.
- 5.4.3. Where cable ties are used, they are to be securely fastened but still permit for cable movement if tugged upon making use of reasonable force.
- 5.4.4. Cable ties are to be used at set intervals of 300mm for all cable bundles thus presenting a uniform appearance.
- 5.4.5. Under no circumstances shall any cable/s hang unsupported, vertical runs are to be supported are no greater than 300mm intervals.
- 5.4.6. When cable ties are cut; once appropriately fastened around cable bundles, in order to remove protrusions beyond the buckle, the installer will ensure that such a cut is clean and that no sharp edges are created which would damage other cable being pulled past it or injure installers and support staff.
- 5.4.7. Cable shall under no circumstances be strapped to PVC electrical conduit or any structures belonging to an unrelated functional unit such as an air conditioning drain pipe as future maintenance by associated maintenance staff may result in damage or removal in order to facilitate work.
- 5.4.8. Where purpose-installed conduits are to be used for structured cabling, such conduits may never be filled beyond 40% of capacity and should bend at a radius of no less than 6 times the outside diameter of such conduit, nor shall more than two 90 degree bends along the total span of such a conduit.
- 5.4.9. Cable is at no point to be placed directly on top of suspended ceiling tiles.
- 5.4.10. Contractors are to ensure that cable is not installed in areas such as roof spaces or in direct sunlight where temperature ranges might exceed the manufactures operating temperate specifications (typically not in spaces where temperatures exceed 60 degrees Celsius.)
- 5.4.11. All metallic support structures, be it conduit, ducting or trays, shall be grounded in accordance with national electric regulations.
- 5.4.12. Ducting systems shall be securely fastened to walls by means of the appropriate fixing hardware so as to ensure a sound and durable installation.

<b>Initial:</b>	
-----------------	--

5.4.13. Ducting system covers are to be fitted securely and any portion of the ducting system found to be cracked or damaged is to be immediately replaced.

**5.5. Power and EMI source separation**

5.5.1. Cable may be laid adjacent to sources of interference such as 240V electrical branch circuits with a minimum separation of 50.8mm where:

- a) A continuous grounded metallic barrier exists between electric cable and structured cabling.
- b) A durable non-metallic insulation exists, other than the insulation material of the cable.
- c) At no point may data cabling cross the path of any power or broadband cable, fluorescent lighting unit (where suspension is used as a means of separation) at an angle less or greater than 90 degrees.

5.5.2. The installer is to ensure that electrostatic devices such as photocopiers and sources of radiation such as x-ray devices, radio transmitters, their antennae and associated broadband cables are to be avoided when routing cable.

**5.6. Post-installation test and certification (General Requirements)**

5.6.1. Every cabling link is to be tested and must meet with the requirements of ISO 11801 Class E (2002) across the full length of the link.

5.6.2. Test requirements as per Permanent Link certification requirement for which the appropriate test adapters are to be used.

5.6.3. The contractor will ensure that the full plot data is stored for each and every test.

5.6.4. The test results shall also be in Fluke Networks Linkware format (.flw).

5.6.5. Test results are to be stored and provided to Overstrand ICT Networks staff in electronic format in .csv and .flw file formats.

5.6.6. Overstrand ICT Networks staff further reserve the right to insist on being present during the self-calibration of the test unit and the instruments initial configuration prior to test and during the test process itself.

5.6.7. The contractor is to advise Overstrand ICT Networks staff within 3 working days of intent to commence testing in order that such a staff member may make himself available to attend testing procedures.

5.6.8. The contractor is required to make available the test equipment and necessary personnel at no extra cost should a member of Overstrand ICT Networks wish to perform random acceptance testing on approximately 10% of the installed cabling infrastructure.

5.6.9. ICTS Networks staff reserves the right to decline acceptance of marginal performing cables irrespective of their having passed testing based on risk of future degradation over the life span of the installed product.

5.6.10. Where it is found that the random tests do not match those presented, Overstrand ICT Networks staff reserves the right to insist on a supervised re-test of any or all installed cables prior to acceptance.

5.6.11. It is the sole responsibility of the contractor to ensure that the appropriate Vendor test and documentation requirements are met in order that Overstrand ICT Networks be provided with a warranty certificate issued by the SCS Vendor.

5.6.12. Any contention regarding Vendor warranty requirements is to be resolved between the Vendor and the contractor and has thus no bearing on the Municipality's requirements as outlined here.

5.6.13. Documentation is to be provided in 3 parts:

5.6.13.1. An excel spreadsheet indicating cable label, location of work area and Telecommunications closet.

5.6.13.2. Termination points etc. in electronic format.

<b>Initial:</b>	
-----------------	--

5.6.13.3. A floor plan or site diagram reflecting the routes taken to and location of all installed cables in

5.6.13.4. Electronic format.

**5.7. Quality assurance requirements;**

5.7.1. The supplied product shall, once installed, conform to ISO 11801 Class E – 2002 electrical characteristics for the purposes of Vendor warranty.

5.7.2. It is expected that installed products be capable of supporting voice and data communications applications and protocols from baseline 56Kbps to ISDN PRI for Analogue and Digital Voice and 10Base T to 1000 Base T for data as per the supported applications of ISO 11801 Class E (2002).

5.7.3. The contractor will hand over all documentation, including, updated floor plans (as installed), test results and installation warranties (Panduit and contractor) to the Overstrand Municipality ICT Project Manager, who will then sign off the installation.

**5.8. Performance measures and targets;**

**5.8.1. Monthly Service Performance Review Meetings**

In compliance with the Local government Municipal Finance Management Act 56 of 2003, Section 116, it is required to “Do Monthly performance reviews” of the Services provided by the Service Provider. The Parties shall agree on a set of pre-defined Key Performance Indicators (KPI’s) to be implemented to serve as an objective measure to monitor the ongoing quality of the Services to be delivered by the Service Provider, the performance of Service Provider, as well as the progress and status of new service requests and projects.
